**What is the Smittestopp app?**

The Smittestopp (‘Infection Stop’) app will help you if you have been in close contact with another Smittestopp user who has been infected by the coronavirus.

Having the Smittestopp app on your smartphone will help the health authorities to provide appropriate advice regarding infection control measures.

If enough people use the Smittestopp app, it will help to reduce the number of people who become ill as a result of the coronavirus.

**How does the Smittestopp app work?**

When you are in close contact with another person who has the Smittestopp app on their smartphone, the apps will send signals to each other.

If the other person has coronavirus disease, the app will remember that your phone has been in close contact with them. You will then receive a text message explaining what you should do to ensure that you do not pass on the infection and advice to help you look after your health.

You will not be told who was ill with coronavirus disease, only the date on which you were in close contact with them.

At helsenorge.no, you can log in using your Bank-ID and find out who has viewed your data from Smittestopp.

**How do I get the Smittestopp app on my smartphone?**

Download the app from App Store, Google Play or Huawei App Gallery.

Under ‘Personvernerklæring’ (Privacy Policy), you must scroll down to the bottom of the page and click the button which says ‘Aksepterer’ (Accept). If you do not understand the language, you can ask for help to explain the text.

Under ‘Tillatelser’ (Permissions), you must press the buttons for ‘Stedstjenester’ (Location Services”) and Bluetooth, so that they turn green and it says ‘Tillatt’ (Permitted).

**Data protection**

You must be aged 16 or over to use the Smittestopp app.

Your data will be stored in a data cloud for 30 days.

You can erase your data in Smittestopp at any time.

You can delete the app at any time.
